

Who we are.

Four generations in porphyry...a lot of experience for the Pisetta family in the natural stones field.

From being simply owners of the extractive areas in the 50s in Trentino Alto Adige, to the building of the laboratories in the 80s, to the creation of the innovative Girasole Porfidi.

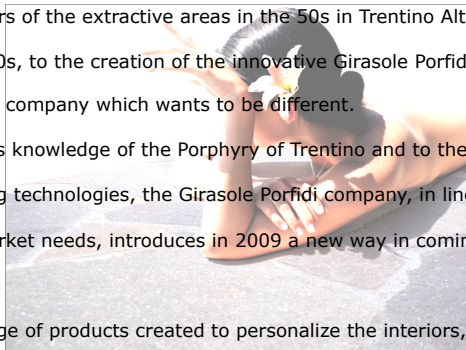

Girasole Porfidi: a young company which wants to be different.

Thanks to the meticulous knowledge of the Porphyry of Trentino and to the improvement of innovative manufacturing technologies, the Girasole Porfidi company, in line with the new and always more specific market needs, introduces in 2009 a new way in coming up with Porphyry:

PORFITE ©.

PORFITE © ... a new range of products created to personalize the interiors, exteriors and gardens.

Consecutively we are explaining our new products giving an overview on the possible solutions offered by our company.

What we are doing.

Since 2009 the Girasole Porfidi company, without leaving traditions, has focused its attention on the study and the development of new manufacturing techniques in working porphyry coming from its own quarries in Trentino. Girasole Porfidi has set as a target the idea of making easier and faster the employment of its products.

For this reason it has designed and **patented** a new range of realizations that answers to the name of PORFITE® .

The peculiarity, that makes the PORFITE® range **unique**, lies in its simplicity and rapidity in placement, thanks to the simple use of glue instead of the previous complex mix of sand and concrete.

All this has been possible thanks to our innovative patent that allows us to calibrate our stone.

The employment simplicity enlarges significantly the number of possible users of PORFITE®, tempting also the "do-it-yourself" lovers to its approach.

PORFITE® ... like a dame!

PORFITE® SYSTEM

PORFITE®, the first Porphyry to be glued.

The PORFITE® range respects the environment for its lightness and natural resources saving. It is an ecological product that extols, for this reason, the ECOPORFIDO® mark.

We suggest 7 types:

TYPES	THICKNESS	KG/MQ
Porfite® opus incertum	mm 20	38
Sheared Tiles	mm 20	48
Sawed Tiles	mm 20	48
Cubes 10 x 10	mm 20	38
Skirting - board	mm 13	28
Coping / step	mm 30	75
Cobblestones 4/6 or 6/8	mm 60/80	100/130

Packaging.

Following the renewal, we have thought about a new packaging in order to help the sale of small quantities.

Two are the possible options: wooden boxes and micropackages.

The products, after being carefully cleaned, are replaced in functional 100 x 100 cm pallet 10+10+10sqm in order to help sale and **the quality controls**: every single shelf measures 1 sqm. In order to meet the smallest requests of the customer, we have designed the micropackages (15-20 kg in nylon for the outdoor exposure), it is easy to stick a bar-code on it and this system offers the huge advantage **to avoid the sale of loose stone**.

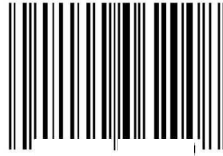

Packaging...

TYPES	MICROPACKAGES	10+10+10 SQM
Porfite® opus incertum		
Sheared Tiles		
Sawed Tiles		
Cubes 10 x 10

Yesterday:

Today with us:

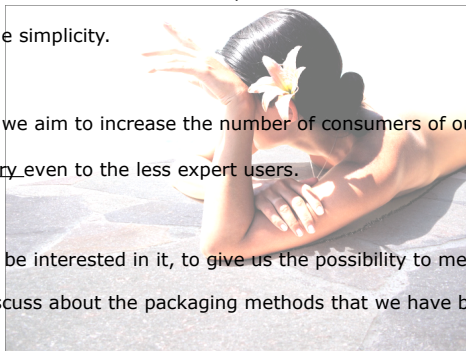

Finally.

Girasole Porfidi, with the whole Porfite © range, aims to answer to the requests of the customer of the large-scale retail trade who needs also small quantities of stone to realize houseworks in full self-reliance with extreme simplicity.

With the PORFITE range we aim to increase the number of consumers of our products, facilitating the placement of porphyry even to the less expert users.

We ask you, if you could be interested in it, to give us the possibility to meet you in order to show you our products and discuss about the packaging methods that we have briefly introduced so far.

Best regards.
